CEOVIA

UNIFIED AI AGENT ECOSYSTEM

& GOVERNED DIGITAL COMMERCIAL PLATFORM

Master Architecture: Governed Intelligence for Cellular Wellness

Document Version	3.0 — Refined
Classification	Implementation Blueprint
Effective Date	April 2026
Governance Model	Human-Controlled AI Commercial Engine
Status	Build-Ready Master Blueprint

EXECUTIVE MANDATE: PLATFORM-FIRST MENTALITY

CEOVIA is not a website with AI agents. It is a governed digital commercial platform where AI supports discovery, qualification, education, conversion, and retention under strict brand and compliance control.

This platform operates on three inviolable principles:

- Clinical Authority First — Every interaction builds scientific credibility
- Governed Automation — AI executes at scale; humans control strategy and compliance
- Regulatory-First Design — Zero-tolerance compliance enforcement through predictive prevention

> ⚠ **Language Correction Applied**
> The original phrase "Regulatory Immunity" has been replaced throughout this document with "Regulatory-first design with zero-tolerance compliance enforcement." The word "immune" implies absolute protection that cannot be legally guaranteed. The revised phrasing communicates the same zero-tolerance intent without creating regulatory liability.

PART 1: STRATEGIC FOUNDATION

1.1 The CEOVIA Positioning Architecture

Core Identity Statement
CEOVIA is a structured cellular support system — powered by 190+ bioactive compounds from Himalayan Sea Buckthorn, extracted via pharmaceutical-grade supercritical CO_2, and delivered through a refined, modern lifestyle experience. Rooted in 8th-century Tibetan medicine. Validated by modern peer-reviewed research. Designed for the 90-day cellular renewal cycle.

1.2 The 70/30 Content Balance (Non-Negotiable)

70% — Clinical Authority	30% — Premium Lifestyle
Science-backed, peer-reviewed	Clean, elegant aesthetic
Structured, logical explanations	Outcome-focused messaging
Doctor-friendly terminology	Emotional resonance
Data-driven, precise tone	Visual aspiration
Cellular-level mechanisms	Daily integration simplicity

1.3 Three-Layer Claims Architecture (Compliance Critical)

Critical Rule
Claims NEVER migrate upward without rewriting. Layer 3 citations are NOT Layer 1 consumer claims. Homepage content = Layer 1 ONLY. Scientific terms such as "collagen synthesis," "hormonal balance," and "cardiovascular markers" must appear only on the Science Page (Layer 2/3), never on the homepage or consumer-facing product pages.

Layer	Audience	Location	Language Rules
Layer 1: Consumer-Safe	General public	Homepage, product pages, social, ads	"Supports," "helps maintain," "designed to support" — NO disease names, NO clinical terms
Layer 2: Professional	Practitioners, clinics	Gated practitioner portal, B2B materials	Mechanism references allowed; no treatment claims
Layer 3: Evidence-Only	Researchers, regulators	Science page, clinical dossier	Study citations required; full context; limitation notes

1.4 Evidence Hierarchy & Badge System

Level	Visual Badge	Hex Code	Permitted Use
Gold	● Peer-Reviewed Human RCT	#C9A961	Science page, practitioner portal, clinical discussions

Silver	○ In-Vivo / In-Vitro Studies	#87A878	Blog educational content, social authority posts
Bronze	△ Traditional / Historical Use	#E6D5B8	Origin story, brand narrative, cultural context
Hypothesis	◇ Mechanism Proposed	#B8B8B8	Future research section, emerging science only

PART 2: THE GOVERNED AI ECOSYSTEM

2.1 Master Control Principle

> **Governance Flow (Inviolable)**
> AI CREATES → CRITIC REVIEWS → SYSTEM QUEUES → YOU APPROVE → THEN EXECUTES Nothing goes live without human approval. No auto-publishing. No medical claims in consumer content. No off-brand messaging. No agent improvisation on regulatory matters.

2.2 Phased Agent Deployment (Revised)

> ⚠ **Strategic Correction: Phase 1 is 4 Agents Only**
> The full 15-agent vision is correct as a long-term architecture. It is NOT correct as a launch plan. Attempting to build all 15 agents in Phase 1 creates: dev complexity, integration delays, unclear ownership, and a debugging nightmare. The phased model below is mandatory.

Phase 1 — Launch Engine (Days 1–30): MANDATORY SCOPE

#	Agent	Primary Function	Integration
1	**Smart Chat Agent (Website)**	Answer product questions; qualify user type; capture lead data	HubSpot CRM
2	**WhatsApp Sales Agent**	Sales desk: qualification, education, objection handling, human handoff	WhatsApp Business API + HubSpot
3	**Compliance Critic Agent**	Pre-approval quality gate; prohibited terms scan; auto-fix or flag	All content agents → Dashboard
4	**SEO Content Agent**	Generate SEO-optimised blogs; identify trending keywords; suggest landing pages	HubSpot CMS → Approval Dashboard

Everything listed below Phase 1 is Phase 2/3 and must NOT be built at launch:

Phase 2 — Growth Engine (Days 31–60)

- Lead Qualification Agent
- Content Creation Agent (Social)
- Email Nurture / Sales Conversion Agent
- Cart Recovery Agent
- Customer Experience Agent (90-Day Protocol)

Phase 3 — Intelligence Engine (Days 61–90)

- Upsell & Retention Agent
- Feedback & Review Agent
- Ad Optimization Agent
- AI Discovery Optimization Agent
- Analytics & Decision Agent

- Funnel Optimization Agent
- B2B Intelligence Agent

2.3 Full 15-Agent Architecture (Long-Term Vision)

#	Agent Name	Primary Function	Integration Point
A — TRAFFIC & DISCOVERY			
1	SEO Content Agent	Auto-generate SEO-optimised blogs; identify trending keywords	HubSpot CMS → Approval Dashboard
2	AI Discovery Optimization Agent	Optimise for ChatGPT, Perplexity, Gemini; structured FAQ blocks	Content schema markup
3	**Compliance Critic Agent ★ Phase 1**	Pre-approval quality gate for ALL content; auto-fix or flag	Content Agent → Critic → Dashboard
B — ENGAGEMENT & QUALIFICATION			
4	**Website Smart Chat Agent ★ Phase 1**	Answer product questions; qualify user type; capture lead data	HubSpot CRM
5	Lead Qualification Agent	Score by behaviour, intent, geography, budget signals	HubSpot lead scoring
C — CONTENT & MARKETING ENGINE			
6	Content Creation Agent	Generate Instagram, LinkedIn, TikTok content; video scripts; email campaigns	Approval workflow → Publishing queue
7	Ad Optimization Agent	Run Meta/Google Ads; A/B test creatives; adjust targeting; improve ROI	Ad platform APIs
D — SALES & CONVERSION ENGINE			
8	**WhatsApp Sales Agent ★ Phase 1**	SALES DESK: qualification, education, objection handling, product selection, human handoff	WhatsApp Business API + HubSpot
9	Sales Conversion Agent	Send offers; trigger urgency; product education; pipeline advancement	HubSpot automation
10	Cart Recovery Agent	Email reminders; WhatsApp nudges; limited-time offers	Shopify + HubSpot
E — POST-SALE & RETENTION			
11	Customer Experience Agent	90-day protocol guidance; bio-feedback loop surveys; Day 15/45/75 check-ins	HubSpot workflows
12	Upsell & Retention Agent	Reorder reminders; bundle offers; subscription push; predictive dropout intervention	HubSpot + Shopify
13	Feedback & Review Agent	Request reviews via email/WhatsApp; aggregate	Review platforms

		social proof; compliant testimonial filtering	
F — INTELLIGENCE & OPTIMISATION			
14	Analytics & Decision Agent	Track conversion rates, campaign performance, lead quality; weekly reports	Analytics dashboard
15	Funnel Optimization Agent	Identify drop-offs; suggest improvements; run experiments; B2B intelligence	A/B testing framework

★ = Phase 1 agents (build first)

PART 3: COMPLIANCE CRITIC AGENT — FULL SPECIFICATION

The Compliance Critic Agent is the single most important agent in the CEOVIA ecosystem. It is the last line of defence before any content reaches the Approval Dashboard. Everything that follows defines the exact parameters it uses to scan, score, and fix content — ensuring the 70/30 balance remains intact and maintaining a zero-tolerance policy for regulatory violations.

3.1 Prohibited Vocabulary Database — Layer 1 (Consumer)

The agent is programmed to flag and block the following terms immediately. These lists are not exhaustive — the agent uses semantic matching to catch derivatives and synonyms.

A. Medical/Drug Verbs (Immediate Block)

Prohibited Verb	Risk Level	Compliant Alternative
Treats / Cures	Critical	Supports / Designed to support
Heals / Reverses	Critical	Helps maintain / Crafted to support
Prevents	Critical	Formulated to support
Boosts (immune system)	Yellow Flag	Supports / Traditionally studied for
Stimulates / Controls	Yellow Flag	May support / Designed to support
Halts / Arrests	Critical	Helps maintain

B. Clinical Descriptors (Layer 1 Block)

- Immunomodulatory — blocked from all Layer 1 consumer content
- Neuroprotective — blocked from Layer 1; permitted in Layer 3 with citation
- Anti-tumour — blocked from all consumer and professional layers
- Collagen synthesis — Layer 2/3 only; must not appear on homepage
- Hormonal balance — Layer 2/3 only; must not appear on product pages
- Cardiovascular markers — Layer 3 only; requires clinical citation

C. Condition & Pathogen Names (Automatic Flag)

Condition Names — BLOCKED	Pathogen Names — BLOCKED
Arthritis, Hepatitis, Dementia	Herpes, Influenza, E. coli
Melasma, Ulcers, Eczema	Adenoviruses, H. pylori
Rosacea, Psoriasis, Acne (therapeutic)	Any named pathogen in Layer 1

3.2 Claim Conversion Logic — Auto-Fix Examples

Original Input (High Risk)	Critic Agent Auto-Fix (Compliant)	Rule Applied
"CEOVIA prevents photo-aging"	"CEOVIA is crafted to help maintain your skin's youthful radiance"	Replace "prevents" with support language
"Reduces hyperpigmentation"	"Formulated to support an even, luminous skin tone"	Remove medical condition reference
"Treats gastric ulcers"	"Designed to support digestive ease and gut lining integrity"	Remove disease names
"Effective against influenza"	"Rich in bioactives studied for their role in immune resilience"	Remove named pathogens
"Immunomodulatory and neuroprotective"	"Designed to support your body's natural resilience and daily vitality"	Remove drug-class descriptors
"Collagen synthesis support"	"Formulated to support your skin's natural renewal processes"	Remove clinical mechanism from Layer 1

3.3 The 3-Step Compliance Scoring Framework

Every piece of content receives a Compliance Score before it reaches the Approval Dashboard. This score determines the processing path.

Path	Score Range	Criteria	Action
✅ **Direct Pass**	95 – 100	Contains only approved verbs; includes mandatory disclaimer; aligns with 70/30 balance	Routes directly to Approval Dashboard
🟡 **Auto-Fix**	80 – 94	Contains minor "Yellow Flag" terms (e.g. "Boosts"). Agent revises, logs the change.	Sends revised version for your final sign-off
🔴 **Flag for Review**	< 80	Explicit medical claim detected (e.g. "Cures disease"). Critical violation.	Blocks the draft; flags for mandatory human review with full violation list

3.4 Evidence Badge Alignment — Technical Guardrails

The Compliance Critic also verifies that Evidence Badges match the actual strength of the claim. Mismatched badges (e.g. a Gold badge on a traditional-use claim) are treated as compliance violations.

Badge	Hex Code	Minimum Evidence Required	Auto-Downgrade Rule
🥇 **Gold**	#C9A961	Peer-reviewed human RCT with statistically significant results	If no RCT found → downgrade to Silver automatically
🥈 **Silver**	#87A878	In-vivo or in-vitro study; may include meta-analysis	If only traditional use → downgrade to Bronze
🥉 **Bronze**	#E6D5B8	Traditional / historical use case; Tibetan or ethnobotanical record	Cannot be upgraded without study data

PART 4: WHATSAPP SALES AGENT — SALES DESK ARCHITECTURE

4.1 Core Mandate

Critical Definition
The WhatsApp Sales Agent is a SALES DESK, not a general AI assistant. It operates within strict functional boundaries. It does not answer open-ended questions, provide life advice, or substitute for human professionals. It qualifies, educates, handles objections, and passes off. That is all.

✅ In Scope	❌ Out of Scope (Strictly Prohibited)
Lead qualification	Medical advice or diagnosis
Product education	Contraindications with specific medications
Objection handling	Claims interpretation beyond training data
Product selection guidance	Market-specific regulatory statements
Human handoff	Improvisation on scientific mechanisms
90-day protocol explanation	Comparison to prescription treatments

4.2 Reasoning Snippets — Governance Rule

⚠ **Important Constraint on Reasoning Snippets**
The Reasoning Snippet feature [📄 Reasoning: Source… Journal…] is powerful but must be governed strictly. RISK: If open AI models generate citations, the result is: hallucinated references, outdated studies, and incorrect interpretation of results — all of which become legal liability. RULE: Reasoning Snippets may ONLY be displayed when the citation is pulled from the verified CEOVIA internal RAG (Retrieval-Augmented Generation) database. The system must NEVER allow open-model citation generation. If no verified source exists in the RAG database, the agent must display: "Our team is verifying the science behind this. A specialist can follow up with full citations." rather than fabricating a reference.

4.3 Conversation Architecture

Phase 1: Greeting & Qualification (0–2 minutes)

"Welcome to CEOVIA. I'm here to guide you through our structured cellular support system. Are you exploring CEOVIA for personal wellness, or are you a practitioner, distributor, or investor?"

- Personal wellness → Consumer Path
- Practitioner → B2B Path (verify licence)
- Distributor → Partnership Path
- Investor → Investor Path (flag for human)

Phase 2: Needs Assessment (2–5 minutes)

Questions: Primary goal (Energy / Skin / Digestion / Immunity / General) · Previous supplement experience · 30-day trial or full 90-day commitment. All responses captured in HubSpot with intent tags.

Phase 3: Objection Handling

Objection	Agent Response Framework	Human Escalation Trigger
Price	"The 90-day system is $225 ($2.50/day). Compare to daily skincare routines. Subscription saves 20%."	Price mentioned 3× or "can't afford" stated
Efficacy	"Clinical studies on Omega-7 show support for cellular membrane integrity [Evidence Badge: Gold]. Results vary by individual."	"Doesn't work" or "scam" mentioned
Safety	"CEOVIA is GRAS-certified. For specific medications, please consult your healthcare provider. I can provide the ingredient list."	Specific drug names mentioned
Competitors	"CEOVIA uses supercritical CO_2 extraction preserving 190+ bioactives. Most supplements use hexane extraction, degrading compounds."	Competitor named 2× with negative sentiment
FDA	"CEOVIA is a dietary supplement, not a drug. We make structure/function claims: 'supports,' not 'treats.'"	Legal questions or FDA anxiety raised

PART 5: B2B ARCHITECTURE & EXPLICIT NAVIGATION

Strategic Priority
For CEOVIA, clinics and distributors are NOT secondary audiences — they are core revenue drivers. The platform must not rely on AI routing alone to serve B2B visitors. Explicit top-level navigation is mandatory from Day 1.

5.1 Mandatory Top Navigation Structure

Nav Item	Primary CTA	AI Agent Triggered
For Consumers	"Start Your 90-Day System" / "Take the 2-Min Assessment"	WhatsApp Sales Agent + Smart Chat
For Clinics	"Request Professional Access" / "Download Clinical Summary"	Lead Qualification Agent → Verification workflow
For Distributors	"Partnership Application" / "Volume Pricing Guide"	Sales Conversion Agent → Human for negotiation

Rule
Do NOT rely only on AI routing for B2B visitors. Explicit navigation links must exist in the header and footer. AI agents supplement navigation — they do not replace it.

5.2 B2B User Journey

User Type	Entry Point	Primary CTA	Agent Handoff
Clinic (Unverified)	/for-clinics	"Request Professional Access"	Lead Qualification Agent → Verification
Clinic (Verified)	pro.ceovia.com	"Access Practitioner Portal"	B2B Sales Agent with clinical dossier
Distributor	/for-distributors	"Partnership Application"	Sales Conversion Agent → Human negotiation
Investor	/investors	"Download Investor Deck"	Analytics Agent flags → C-suite follow-up

PART 6: TRUST LAYER ARCHITECTURE

Why This Section Exists
CEOVIA has a strong content system, agent system, and compliance system. What was missing — and what will stall conversion without it — is a dedicated Trust System. Without visible proof of manufacturing standards, safety testing, certifications, and transparent sourcing, buyers — especially in the clinic and high-net-worth consumer segments — will not convert, regardless of how good the AI is.

6.1 Required Trust Modules (Mandatory Before Launch)

Module	Content	Placement
Manufacturing Standards	GMP certification details; facility audits; batch traceability; supercritical CO_2 extraction documentation	Science page + Practitioner portal
Certifications	GRAS status; Halal certification; relevant regional approvals (FDA DSHEA, UAE MOH, EFSA)	Footer (badges) + About page
Safety & Testing	Third-party lab testing summary; heavy metal screening; bioavailability data; stability testing	Science page + Product pages
Sourcing Transparency	Himalayan Sea Buckthorn origin story; harvest season; supplier verification; sustainability practices	Origin/About page + Brand narrative
FAQ — Risk-Focused	"Is this safe?" "Who should not use CEOVIA?" "Can I take this with [medication]?" "What if I'm pregnant?"	Dedicated FAQ page + Smart Chat training
"Who Should Not Use This"	Clear contraindication guidance: pregnancy, certain medications, specific conditions — always with "consult your doctor" language	Product page + WhatsApp Sales Agent script

PART 7: SHARED MEMORY LAYER — DATA GOVERNANCE

Risk Assessment
The Shared Memory Layer (Redis + cross-session tracking + behaviour logging) is technically excellent. However, it introduces significant compliance exposure under GDPR (EU), PDPA (Singapore/Thailand), and UAE data protection regulations. These risks must be resolved before deployment — they are not optional.

7.1 Data Governance Requirements

Requirement	What It Means	Implementation
Data Minimisation	Collect ONLY what is necessary for agent function. Do not log conversation content beyond what is needed for compliance audit.	Define exact data fields per agent. No open-ended logging.
Consent-Based Tracking	Behavioural tracking (pages visited, time on site, chat history) requires explicit user consent.	Cookie consent banner → opt-in before any behaviour tracking begins. Separate consent for WhatsApp history retention.
Anonymisation Layer	All analytics and scoring models must operate on anonymised or pseudonymised IDs, not PII.	Hash all user IDs before passing to scoring models. Never use email or phone as primary key in Redis.
Right to Erasure	Users can request deletion of their memory data (EU, UK, UAE requirement).	Build erasure endpoint into Redis layer. Test before launch. Document in privacy policy.
Session Boundary	Define maximum session memory retention period per user type. Do not persist indefinitely.	Consumer: 90-day protocol + 30 days post. B2B: 12 months with review.

PART 8: TECHNICAL ARCHITECTURE

8.1 The 8-Layer Technical Stack

#	System	Technology	Performance Target
1	Edge Security & Compliance	Cloudflare Workers + DLP + Compliance Filter API	100% PII masked pre-processing; zero violations
2	Experience Layer	Next.js 15 (PPR) + Vercel Edge	<1.2s LCP, 100 Lighthouse score
3	Commerce Engine	Shopify Plus + Hydrogen/Oxygen	99.99% uptime, 40K checkouts/min
4	Content Platform	Sanity (structured, localised, occasion-tagged)	<50ms query response
5	Social Commerce	TikTok Shop + Instagram Graph API	<5s inventory sync, real-time UGC
6	AI & Intelligence	OpenAI Responses API + RAG + Mastra/LangGraph	4× conversion rate; stateful 90-day memory
7	Search & Discovery	Algolia + AEO schema + Occasion Tagging	90%+ AI citation accuracy
8	Governance & Data	PostgreSQL 16 + Redis 7 + Audit Logging	Zero compliance incidents; 7-year audit retention

8.2 Market-Specific Agent Configuration

Market	Content Personality	Compliance Filter	Channel Priority
USA (FDA)	Direct, science-forward, results-oriented	Structure/function claims; GRAS status; mandatory disclaimer	Email + Subscription
EU (EFSA)	Cautious, EFSA-reference heavy, process-transparent	Approved health claims only; Novel Food compliant	Single-purchase preference
UK (MHRA)	NHS-aware, understated, MHRA guidance-aligned	Post-Brexit regulatory alignment; borderline guidance	Practitioner channel focus
UAE / GCC	Relationship-focused, Halal certification prominent, luxury positioning	MOH/SFDA registration; Arabic language requirements	WhatsApp-first; AED pricing

PART 9: PHASED IMPLEMENTATION ROADMAP

Phase 1 — Launch Engine (Days 1–30)

Day	Deliverable	Success Metric	Agent Deployed
7	Cloudflare + Vercel + Next.js 15 scaffold + Compliance Filter API	<100ms TTFB	Edge Security active
14	Shopify Plus integration + WhatsApp Business API application + HubSpot CRM setup	Checkout functional	HubSpot connected
21	Sanity CMS + Compliance Critic Agent trained + Approval Dashboard live	Content workflow live; Critic scoring active	SEO Agent + Critic Agent
28	PII masking validated + Shared Memory Layer with data governance + consent flows	100% PII detection; consent banner deployed	Data governance active
30	Core site live with Layer 1 content only + Smart Chat Agent + WhatsApp Sales Agent	Lighthouse >90; WhatsApp response <2 min	Smart Chat + WhatsApp Sales

Phase 2 — Growth Engine (Days 31–60)

Day	Deliverable	Success Metric	Agent Deployed
35	Algolia search + AEO schema + Occasion Tagging	<50ms query time	AI Discovery Agent
40	Instagram Shopping integration + social aggregation	Product tagging live	Social Commerce Agent
45	Email automation workflows + Bio-feedback loop surveys	40% email open rate	Customer Experience Agent
50	Lead scoring + B2B portal (/for-clinics, /for-distributors)	10% B2B traffic	Lead Qualification Agent
60	Content Creation Agent (social) + Cart Recovery Agent	80% first-pass approval rate	Content + Cart Recovery

Phase 3 — Intelligence Engine (Days 61–90)

Day	Deliverable	Success Metric	Agent Deployed
70	Full AI concierge (governed) with Mastra/LangGraph orchestration	4× conversion rate	All 15 agents operational
75	TikTok Shop integration + viral moment protection	<5s inventory sync	Social Commerce scaled
80	Advanced governance automation + B2B Intelligence Agent	Zero violations	Compliance automated
85	Funnel intelligence + Predictive Retention + Upsell Agent	15% drop-off reduction	Funnel Optimisation Agent

90	Full platform launch — self-operating governed commercial engine	<1.2s LCP; 99.99% uptime	Full ecosystem live

PART 10: SUCCESS METRICS & KPIs

Category	Metric	CEOVIA Target	Industry Top 10%
Performance			
Performance	LCP (mobile)	<1.2s	<2.5s
	TTFB	<50ms	<200ms
	Lighthouse Score	100	>90
Commerce			
Commerce	Conversion rate	>5%	>3%
	Average order value	$150+	$85
	Checkout completion	>85%	>70%
AI Agent KPIs			
Compliance Critic	Violations caught pre-human	>95%	—
	False positive rate	<5%	—
WhatsApp Sales	Response time	<2 minutes	—
	Conversation → sale	>15%	—
	Human escalation rate	<10%	—
SEO Content Agent	Content output	8 blogs/week	—
	First-pass approval rate	>80%	—
Compliance Incident Rate	Violations reaching publish	0	<1/year

PART 11: STRATEGIC POSITIONING — YOUR REAL ADVANTAGE

Competitive Advantage Statement
This platform is now a build-ready master blueprint. It is structured, layered, governed, and scalable. You can give this to Claude/Codex for execution and to a development team for architecture. Your real competitive advantage is not AI. Not the website. Not the content. It is this: Controlled AI + Compliance + Premium Positioning + System-Based Narrative. That combination is rare. Protect it with the phased build approach and governance controls in this document.

Traditional Wellness Brands	CEOVIA Governed Platform
Uncontrolled content production	Every output compliance-scored before publish
Reactive to regulatory issues	Regulatory-first design; predictive enforcement
AI as a chatbot feature	AI as commercial engine; human controls strategy
B2B as an afterthought	B2B as core revenue; explicit navigation and dedicated agents
Trust assumed, not demonstrated	Trust architecture: certs, testing, sourcing — all visible
Single market, single language	Market-configured agents; 4-market compliance stack

— End of Document —
